ADSL DSLAM menedzsment felülete

- Egy régebbi (sima) ADSL DSLAM menedzsment szoftveréből lesznek képek
- Különböző sebességértéket állítunk be, mint maximum a felhasználónak
- Különböző hosszúságú előfizetői hurkot szimulálunk
- Megnézzük, hogyan használja ki az egyes csatornákat a DSL rendszer
 - a modem és a DSLAM ezeket automatikusan határozzák meg a csatorna paramétereit megmérve
- A fő tanulság: nagyobb frekvencián, nagyobb távolságra nő a csillapítás

Hibátlan eset (20 m „előfizetői hurok”)

max megengedett sebességnek a felhasználónak (mi állítjuk be)

az aktuális érték, ezek minimuma

a vonal paramétereit ennyit engednek meg max.

nem tegnap volt :)

Parameter	Downstream	Upstream
Max rate (kbps)	2 048	64
Min rate (kbps)	2 048	64
Current values Rate (kbps)	2 048	64
Current values Margin (dB)	31	31
Max attain rate (kbps)	8 096	768

2 Mb/s

The screenshot displays the Element Manager hiX 5300 V1.2 interface. The title bar reads "Element Manager hiX 5300 V1.2 - Client connected to POWER". The menu bar includes "File", "View", "Configuration", "Fault", "Measurement", "Security", "Utilities", "Options", "Window", and "Help". The toolbar shows various icons and a "Zoomed 100%" dropdown. The main window is titled "ADSL" and shows configuration for Module: SUADSL.16P#303, Port: 2, and Line Index: 34. The "Status" tabs include "ADSL Local", "ADSL Remote", "NT", "ATM25", "Ethernet", and "Line Supervision".

On the left, a "Modules" sidebar lists: NE, STM1, ADSL (highlighted with a green double-headed arrow), SDSL, and SHDSL.

The main area contains two graphs and a control panel:

- Downstream Channel:** A graph showing signal quality across 255 bins. The y-axis ranges from 1 to 15. A red arrow points to a peak in the higher frequency bins.
- Upstream Channel:** A graph showing signal quality across 63 bins. The y-axis ranges from 1 to 15.
- Control Panel:** Includes a "Mode" section with "Bits per BIN" selected and "SNR" unselected. Below it are "ADSL Transmission Rate" fields for "Downstream (kbps)" and "Upstream (kbps)", an "Update" button, and an "Export all" button.

A red text box with a white background is overlaid on the Downstream Channel graph, containing the text: "a magasabb frekvenciákat is használja, hiszen rövid a vonal, így ott is kicsi a csillapítás".

The Windows taskbar at the bottom shows the Start button, several application icons, and the system tray with the date "12:32:53 PM 4/6/2007" and time "12:32".

8 Mb/s, 20 m-es hurok

8 Mb/s, 20 m-es hurok

The screenshot displays the Siemens Element Manager hiX 5300 V1.2 interface. The title bar reads "Element Manager hiX 5300 V1.2 - Client connected to POWER". The menu bar includes File, View, Configuration, Fault, Measurement, Security, Utilities, Options, Window, and Help. The toolbar shows various icons and a "Zoomed 100%" dropdown. The main window is divided into several sections:

- Modules:** A vertical sidebar on the left contains icons for STM1, ADSL (highlighted with a blue box), SDSL, and SHDSL.
- Status:** A tabbed interface at the top of the main area shows "Status", "ADSL Local", "ADSL Remote", "NT", "ATM25", and "Ethernet".
- Downstream Channel:** A line graph showing signal strength across a frequency range from 1 to 255. A red arrow points to a specific data point in the graph.
- Upstream Channel:** A line graph showing signal strength across a frequency range from 1 to 63.
- Mode:** Radio buttons for "Bits per BIN" (selected) and "SNR".
- ADSL Transmission Rate:** Input fields for "Downstream (kbps)" and "Upstream (kbps)".
- Buttons:** "Update" and "Export all" buttons are located at the bottom right of the configuration area.

A red text annotation is overlaid on the graph area, reading: "szépen belefér (ADSL2+-nál majd jóval több is bele fog férni)".

The Windows taskbar at the bottom shows the Start button, several application icons, and the system tray with the date "4/6/2007" and time "13:22".

Nagy frekvencián nagyobb a csillapítás

The screenshot displays the Element Manager hiX 5300 V1.2 interface. The main window shows two graphs: 'Downstream Channel' and 'Upstream Channel'. The 'Downstream Channel' graph shows a signal spectrum with a red arrow pointing to the high-frequency end, indicating higher attenuation. The 'Upstream Channel' graph shows a similar spectrum but with a much lower signal level. A red text box with a white background is overlaid on the 'Downstream Channel' graph, containing the text: 'a magasabb frekvenciákat nem használja, így az alacsonyabbakon rosszabb lesz a jel/zaj viszony, de azért még megy'. The interface also includes a 'Modules' sidebar on the left with icons for STM1, ADSL, SDSL, and SHDSL. The top menu bar includes 'File', 'View', 'Configuration', 'Fault', 'Measurement', 'Security', 'Utilities', 'Options', 'Window', and 'Help'. The bottom status bar shows the system time as 12:48:11 PM on 4/6/2007.
